BRAKE PEDAL

COMPONENTS

- **Driver Side Junction Block**
  - 8.0 (82, 71 in.*lb)*

- **Bracket**
  - 8.0 (82, 71 in.*lb)*

- **Instrument Panel Finish Panel Lower No. 1**

- **Cowl Side Trim Board**

- **Clip**

- **Front Floor Footrest**

- **Front Door Scuff Plate**

-N*m (kgf*cm, ft*lbf): Specified torque

for **Automatic Transmission:**

- **Instrument Panel Under Tray**

for **Manual Transmission:**

- **Instrument Panel Hole Cover**
BR–10 BRAKE – BRAKE PEDAL

- PUSH ROD PIN
- CLIP
- MASTER CYLINDER PUSH ROD CLEVIS
- BRAKE PEDAL RETURN SPRING
- BRAKE PEDAL SUPPORT SUB-ASSEMBLY
- STOP LIGHT SWITCH MOUNTING ADJUSTER
- STOP LIGHT SWITCH CONNECTOR
- STOP LIGHT SWITCH ASSEMBLY
- BRAKE PEDAL BUSH
- BRAKE PEDAL LEVER
- BRAKE PEDAL SUPPORT REINFORCEMENT
- BRAKE PEDAL SHAFT COLLAR
- BRAKE PEDAL LINK ASSEMBLY
- BRAKE PEDAL BUSH
- BRAKE PEDAL LINK PIN RING E
- BRAKE PEDAL LINK PIN
- BRAKE PEDAL ASSEMBLY
- BRAKE PEDAL BUSH
- BRAKE PEDAL BUSH
- BRAKE PEDAL BUSH
- BRAKE PAD
- BRAKE PEDAL PAD

N*m (kgf*cm, ft*lbf) : Specified torque

- Non-reusable part
- Lithium soap base glycol grease
ON-VEHICLE INSPECTION

1. INSPECT BRAKE PEDAL HEIGHT
   (a) Check the brake pedal height.
   **Pedal height from dash panel:**
   158.1 to 168.1 mm (6.224 to 6.618 in.)
   **NOTICE:**
   Do not adjust the pedal height. Doing so by changing the push rod length will structurally change the pedal ratio.
   If the pedal height is incorrect, adjust the rod operating adapter length.
(b) Adjust the rod operating adapter length.
   (1) Remove the clip and clevis pin.
   (2) Loosen the clevis lock nut.
   (3) Adjust the rod operating adapter length by turning the pedal push rod clevis.

   Rod operating adapter length A:
   w/ VSC: 214 to 224 mm (8.425 to 8.818 in.)
   w/o VSC: 212 to 222 mm (8.346 to 8.740 in.)

   (4) Tighten the clevis lock nut.

   Torque: 25.5 N·m (260 kgf·cm, 19 ft·lbf)

   (5) Install the clip and clevis pin.

   • If the pedal height is incorrect even when the rod operating adapter is adjusted, check that there is no damage in the brake pedal, brake pedal lever, brake pedal bracket or dash panel.

   • Even if there is damage, there is no problem if the reserve distance is within the standard value.

   • If necessary, replace the parts.

2. INSPECT AND ADJUST STOP LIGHT SWITCH

   HINT:
   If the pedal height is incorrect, check and adjust the stop light switch.

   (a) Disconnect the stop light switch connector from the stop light switch.

   (b) Turn the stop light switch counterclockwise, and remove the stop light switch.

   (c) Insert the stop light switch until the body comes into contact with the cushion.

   NOTICE:
   • When inserting the stop light switch, support the pedal from behind so that the pedal is not pushed in.

   • Take care not to depress the pedal during the operation.
(d) Make a quarter turn clockwise to install the stop light switch.

**NOTICE:**
The turning torque for installing the stop light switch:

Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf) or less

**HINT:**
Due to the inverse screw structure, turning the stop light switch clockwise will cause it to become loose and eventually detach from the adjuster.

(e) Connect the stop light switch connector to the stop light switch.

(f) Check the protrusion of the rod.

**Protrusion of the rod:**

1.5 to 2.5 mm (0.059 to 0.098 in.)
3. **INSPECT PEDAL FREE PLAY**
   (a) Stop the engine and depress the brake pedal several times until there is no more vacuum left in the booster.
   (b) Push in the pedal until the beginning of the resistance is felt. Measure the distance as shown.
   **Pedal free play:**
   1 to 6 mm (0.04 to 0.24 in.)

4. **INSPECT PEDAL RESERVE DISTANCE**
   (a) Release the parking brake pedal.
   With the engine running, depress the pedal and measure the pedal reserve distance as shown.
   **Pedal reserve distance from asphalt sheet at 490 N (50 kgf, 110.2 lbf):**
   More than 55 mm (2.17 in.)
   If incorrect, troubleshoot the brake system.
